In 1972, Greenheck took the lead as the first commercial and industrial fan manufacturer to introduce electrostatic powder coatings. Greenheck continues to lead by offering a superior epoxy powder base coat and powder coating finish.

This epoxy base coat technology is used extensively outside the HVAC industry to protect bridge beams, automotive components and other heavy-gauge steel products. This advanced technology is available on Greenheck steel products.

Greenheck’s coating process starts with a minimum of five wash stages to treat all components prior to painting. Cleaner parts result in better coating adhesion and durability. We then use an advanced two coat powder application method that includes a base coat of epoxy powder and a topcoat of Greenheck’s Hi-Pro Polyester. The combination of this topcoat over our epoxy base coat results in the coating Hi-Pro Z. These oven-cured coatings provide superior corrosion resistance along with a tough, uniform finish to combat the most extreme conditions.

To help determine what process and coating may be right for your specific environment, refer to the performance tested guide provided on page three.

**Two Coat System**

When compared to a traditional single coat powder application, the benefits of the two coat system include:

- An automatic powder coat application produces uniform coverage and unmatched paint quality.
- The double coat thickness provides superior durability and protection from air and water.
- The base coat provides additional corrosion protection.

Coating Advantage
When selecting a powder coating finish for heavy-gauge welded steel fans, critical information such as environment, moisture, exposure, abrasives, and chemicals should be considered.

Powder coatings are the best choice for most extreme applications. Major advantages over most vendor-applied liquid coatings include:

- Superior finish with uniform coverage and thickness.
- A better coating provides better protection.
- The process is environmentally friendly.
- Unequaled value.

Salt Spray ASTM B117 is a comparative test that indicates the corrosion resistance of powder paint coatings.

Pencil hardness and cross-hatch adhesion tests determine the durability of a coating to withstand scratches, nicks and chips.

Chemical resistance ratings provide information on how each coating option will hold up in certain chemical environments.

Greenheck’s two coat powder paint system provides unparalleled corrosion protection in the most extreme conditions. Our paint system offers three and four times the corrosion resistance of other coatings commonly available in the fan industry.
Specifications

Multi-Stage Wash
All carbon steel components shall be cleaned and chemically treated by multi-stage processes that shall include alkaline cleaner to remove oil and film; iron phosphate coating to increase corrosion protection and paint bond; and seal rinse to seal pores in iron phosphate coating for optimum corrosion protection.

Two Coat Electrostatic Powder System
Fan components shall be coated with a two coat powder coating consisting of an epoxy powder base coat electrostatically applied and gelled. Minimum dry film thickness to be 2-3 mils. A polyester powder topcoat shall be electrostatically applied at a minimum dry film thickness of 2-3 mils atop the base coat and baked simultaneously with the epoxy base coat. The total dry film thickness of the two coat powder coating system shall be a minimum of 4-6 mils.

Available Coatings
Hi-Pro Z shall exceed 4,000-hour salt spray under ASTM B117 test method. Finish color shall be concrete grey, RAL-7023. Specify Hi-Pro Z for your extreme applications or for any environment where physical appearance and corrosion protection is essential.

Our Commitment
As a result of our commitment to continuous improvement, Greenheck reserves the right to change specifications without notice.

Product warranties can be found online at Greenheck.com, either on the specific product page or in the literature section of the website at Greenheck.com/Resources/Library/Literature.
