

Model DFD-230

Multi-Blade Fire Damper Steel 3V Blades

UL555 3 Hour Fire Resistance Rating

Application

Model DFD-230 is a multi-blade fire damper with 3V style blades. The DFD-230 is qualified to 4000 fpm (20.3 m/s) and 10 in. wg (2.5 kPa) for dynamic closure in emergency fire situations. Model DFD-230 may be installed vertically (with the blade running horizontal) or horizontally and is rated for airfoil in either direction.

Ratings

UL 555 Fire Resistance Rating

Fire Rating: 3 hours

Dynamic Closure Rating: Actual limits are size dependent

Maximum Velocity: 4000 fpm (20.3 m/s) up to 32 in. x 48 in. (813mm x 1219mm) 2000 fpm (10.2 m/s) sizes greater than that.

Maximum Pressure: 10 in. wg (2.5 kPa)

Model DFD-230 meets the requirements for fire dampers established by:

National Fire Protection Association
NFPA Standards 80, 90A, & 101
IBC International Building Codes

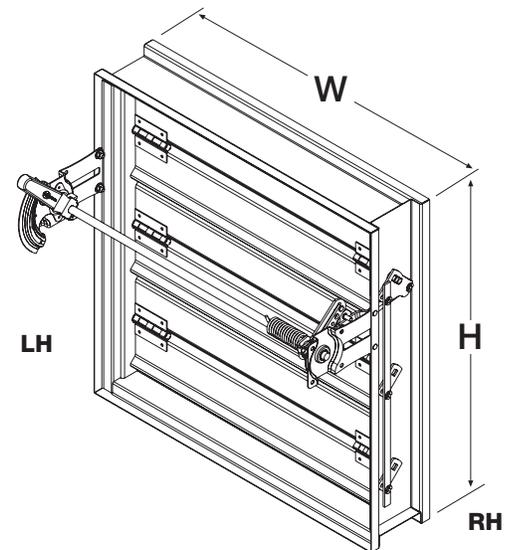

“UL CLASSIFIED (see complete marking on product)”

“UL CLASSIFIED to Canadian safety standards (see complete marking on product)”
Standard 555 (Listing #R13317)

| Construction | Standard | Optional |
|--------------------------|--|------------------------------|
| Frame Material | Galvanized steel | - |
| Frame Material Thickness | 16 ga. (1.5mm) | - |
| Frame Type | 5 in. x 1 in. (127mm x 25mm) hat channel | - |
| Blade Material | Galvanized steel | - |
| Blade Material Thickness | 16 ga. (1.5mm) | - |
| Blade Type | 3V | - |
| Linkage | Plated steel out of airstream, concealed in jamb | |
| Axle Bearings | Bronze | - |
| Axle Material | Plated steel | - |
| Jamb Seals | 304SS | - |
| Closure Device | Fusible link | - |
| Closure Temperature | 165°F (74°C) | 212°F (100°C), 350°F (177°C) |
| Actuator | Manual quadrant | - |

Greenheck India Pvt. Ltd. and Greenheck Fan Corporation certifies that the model DFD-230 shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Programs. The AMCA Certified Ratings Seal applies to air performance ratings only.

* W & H dimensions furnished approximately 1/4 in. (6mm) undersize. Add sleeve thickness for overall sleeved damper dimension.

| W x H | Minimum Size | Maximum Size | |
|--------|--------------|-------------------------|---------------|
| | | Single Section | Multi-Section |
| Inches | 8 x 6 | 36 x 36 or 32 x 48 | 72 x 48 |
| mm | 203 x 152 | 914 x 914 or 813 x 1219 | 1829 x 1219 |

Features

- Frames are constructed with reinforced corners. Low profile head and sill are used on sizes less than 17 in. (432mm) high.
- Blades are reinforced with 3 longitudinal structurally designed vee's.

Options

- Extra fusible links
- Factory installed Accessories
 - Retaining angles
 - Quick connect breakaway connections
- OCI (Open Closed Indication switches): Units will be supplied with one OCI per row of damper sections
- Sleeves
- Transitions (R)

Installation instructions available at www.greenheck.com

This pressure drop testing was conducted in accordance with AMCA Standard 500-D using the three configurations shown. All data has been corrected to represent standard air at a density of .075 lb/ft³(1.201 kg/m³).

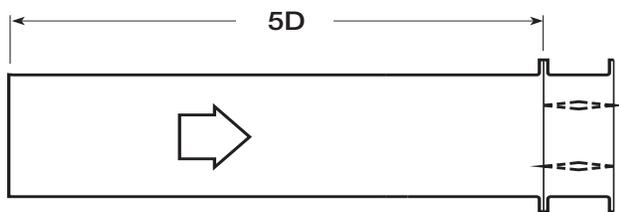

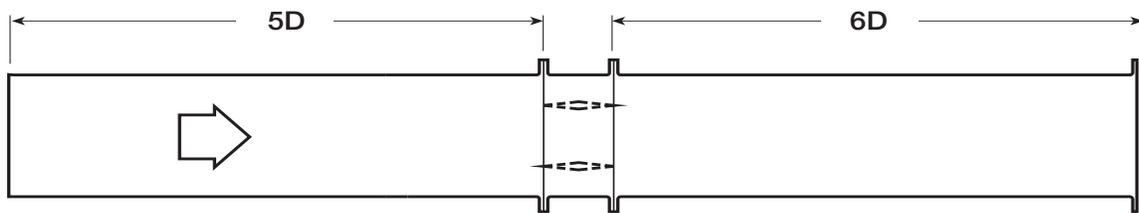

Actual pressure drop found in any HVAC system is a combination of many factors. This pressure drop information along with an analysis of other system influences should be used to estimate actual pressure losses for a damper installed in a given HVAC system.

AMCA Test Figures

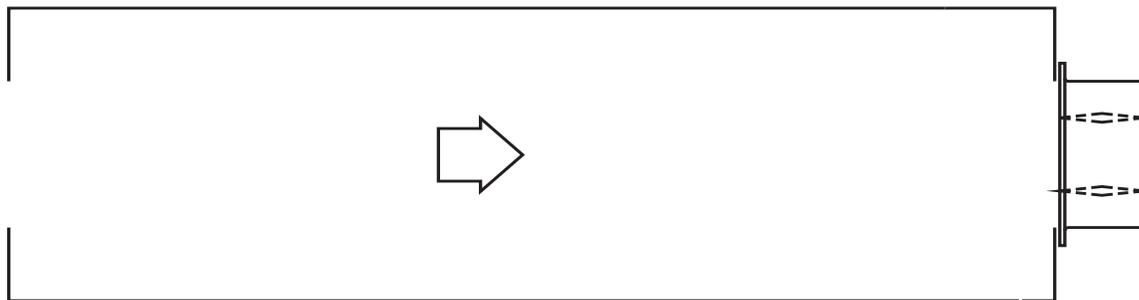

Figure 5.3 Illustrates a fully ducted damper. This configuration has the lowest pressure drop of the three test configurations because entrance and exit losses are minimized by straight duct runs upstream and downstream of the damper.

Figure 5.2 Illustrates a ducted damper exhausting air into an open area. This configuration has a lower pressure drop than Figure 5.5 because entrance losses are minimized by a straight duct run upstream of the damper.

Figure 5.5 Illustrates a plenum mounted damper. This configuration has the highest pressure drop because of extremely high entrance and exit losses due to the sudden changes of area in the system.

$$D = \sqrt{\frac{4 (W) (H)}{3.14}}$$

Greenheck India Pvt. Ltd. and Greenheck Fan Corporation certifies that the model DFD-230 shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Seal Programs. The AMCA Certified Ratings Seal applies to air performance ratings only.

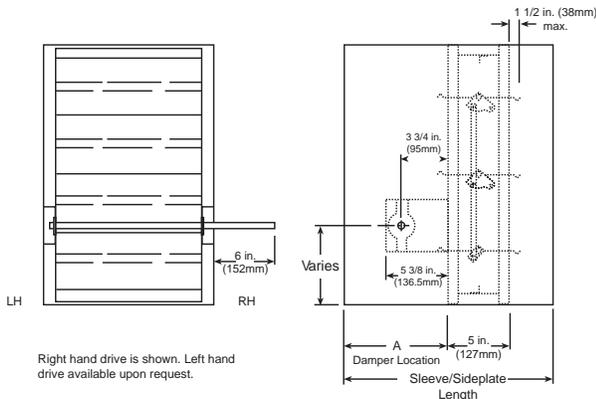

Damper Sizing Information

Dampers larger than maximum single section size are supplied as a factory assembly of two or more sections of equal size. The following figures show maximum damper section size and assembly configurations for multi-section dampers.

Damper Sleeve Dimensional Data

The drawings below and corresponding table show the position of the DFD-230 damper when mounted in a factory sleeve. The standard mounting locations provide enough space for the mounting of manual quadrant, controls and allow space for installation of retaining angles and duct connections.

The "A" dimension is the location of the damper mounted in a factory sleeve. The table below shows the Standard and Maximum "A" dimensions.

| in. (mm) | "A" Dimension | |
|---|---------------|----------|
| | Standard | Minim |
| All Dampers | 7 3/16 (183) | 12 (305) |
| When H is 10 in. (254mm) or less with OCI | 12 (305) | 12 (305) |

*With the exception of dampers 10 in. high (254mm) or less. NOTE: Entire damper frame is not required to be installed within the wall. The damper blades, when closed should be contained within the wall.

All dimensions shown are in inches.

Specifications

Fire Dampers meeting the following specifications shall be furnished and installed where shown on plans and/or as described in schedules. Dampers shall meet the requirements of the latest edition of NFPA 80, 90A and 101.

Dampers shall be tested, rated and labeled in accordance with the latest edition of UL Standard 555. Dampers shall have a UL 555 fire rating of 3 hours. Each damper shall be equipped with a heat responsive device which has been tested and approved for use with the damper assembly in accordance with UL 555. The heat responsive device shall have a temperature rating of (specifier select one of the following) 165°F (74°C), 212°F (100°C), or 350°F (177°C). Dampers shall be UL labeled for use in dynamic systems. The damper shall have a dynamic closure pressure rating of 10 in. wg (2.5 kPa).

Damper actuator shall be manual quadrant. Manufacturers submittal data shall indicate actuator space requirements around the damper. UL 555 Dynamic Closure Ratings shall be qualified for airflow and pressure in either direction through the damper. UL ratings shall allow for mounting damper vertically (with blades running horizontal) or horizontally.

The Damper Manufacturers submittal data shall certify all air performance pressure drop data is licensed in accordance with the AMCA Certified Ratings Program for Test Figures 5.2, 5.3 and 5.5. Damper air performance data shall be developed in accordance with the latest edition of AMCA Standard 500-D.

Damper blades shall be 16 ga. (1.5mm) galvanized steel 3V type with three longitudinal grooves for reinforcement. Blades shall be completely symmetrical relative to their axle pivot point, presenting identical resistance to airflow and operation in either direction through the damper (blades that are non-symmetrical relative to their axle pivot point or utilize blade stops larger than 1/2 in. (13mm) are unacceptable).

Damper frame shall be 16 ga. (1.5mm) galvanized steel formed into a structural hat channel shape with reinforced corners. Bearings shall be sintered bronze sleeve type rotating in extruded holes in the damper frame for maximum service. Axles shall be square and positively locked into the damper blade. Jamb seals shall be stainless steel compression type.
