8 AER-M Sidewall Fan
with Weatherhood

Delivering the total package

Warehouses and distribution centers have high ceilings and few walls. The large doors and loading bays often remain open in any weather. Gas-powered vehicles operate inside. However, these buildings still need clean, comfortable spaces. This need requires a well-integrated, multifaceted ventilation system to move, clarify, and treat the air.

Greenheck offers a complete line of ventilation products for warehouses. These products keep operating and installation costs low while creating a comfortable, safe and productive environment for employees.
