

THE LOOK THAT WORKS

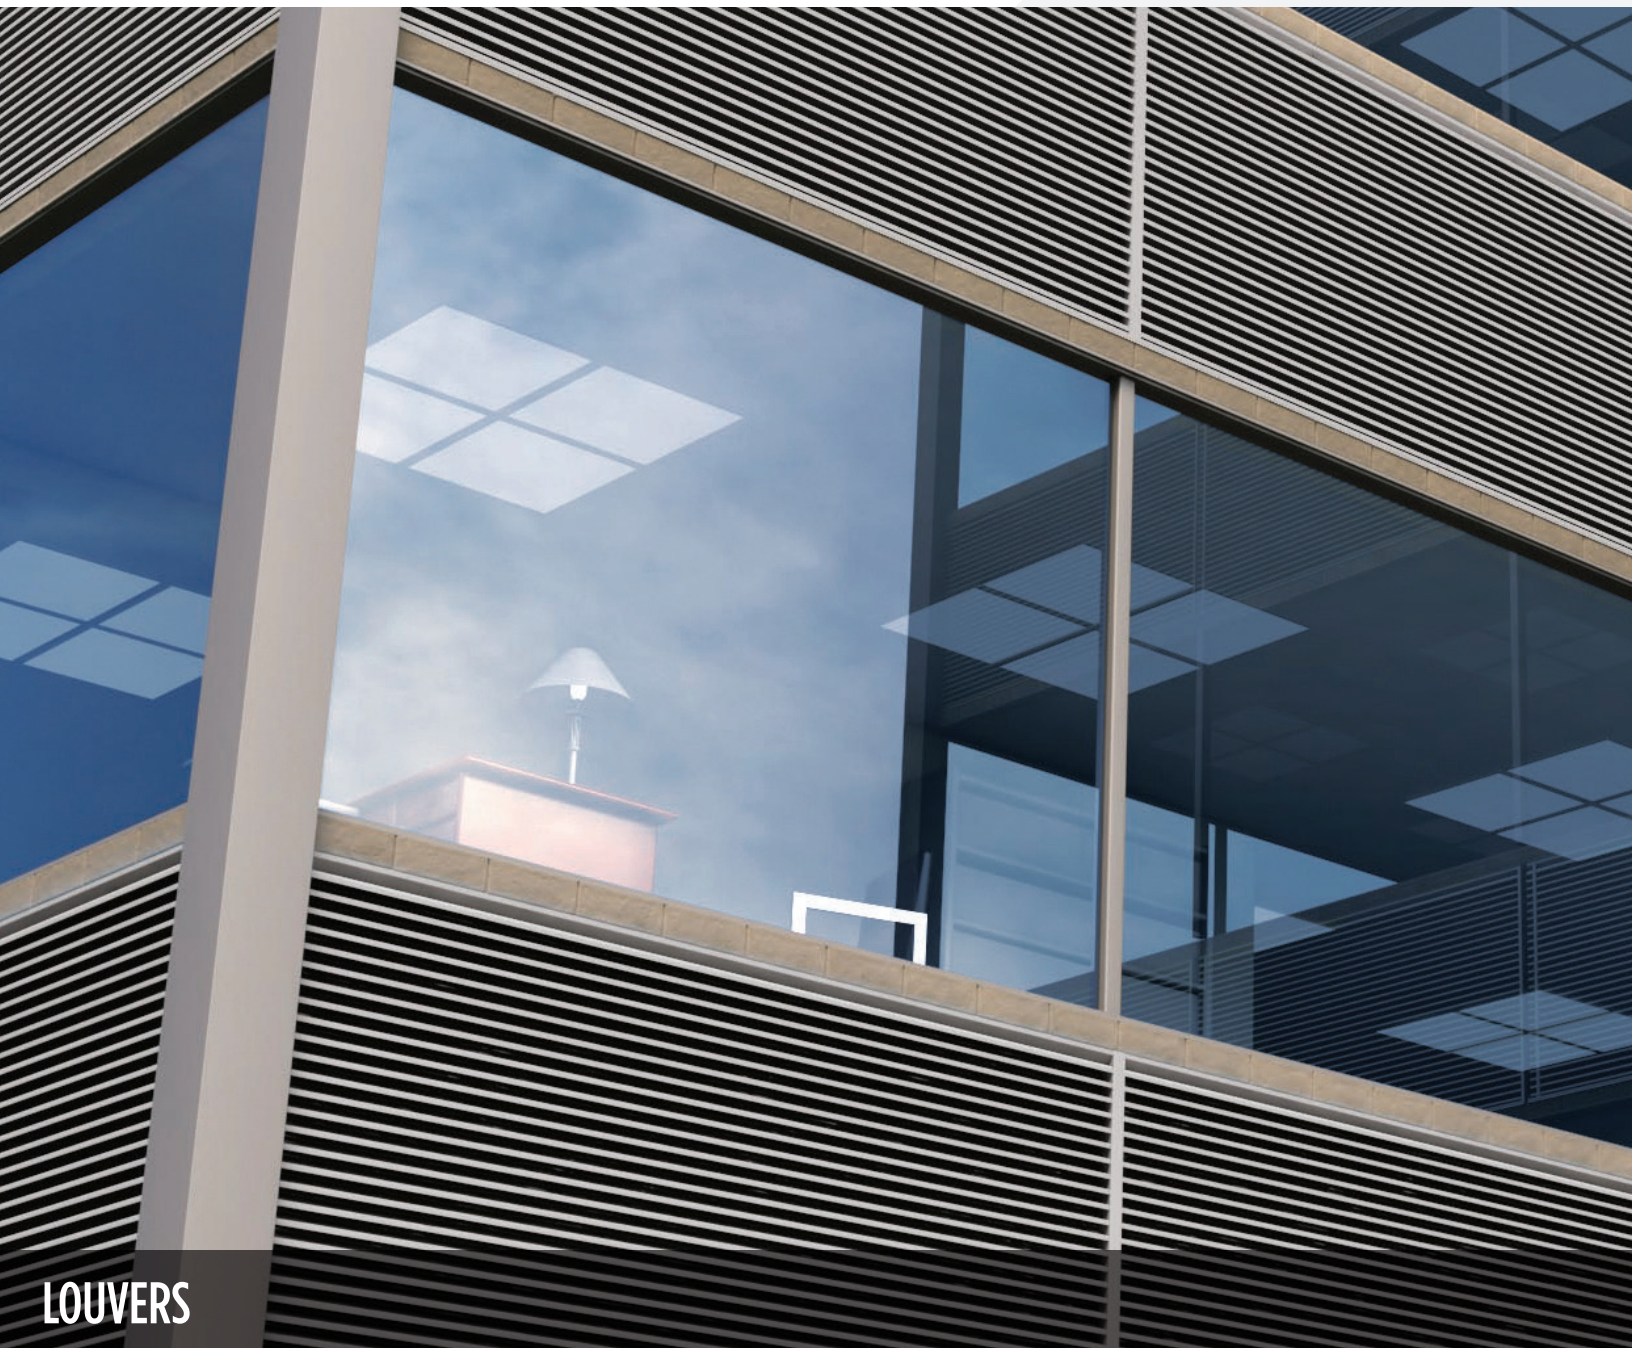

For architects, contractors, and building owners across the US, Airolite provides innovative product solutions that make a unique visual statement while performing critical building functions. Airolite architectural louvers, custom grilles, louver equipment screens, sun controls, and canopies ventilate, illuminate, reduce glare, prevent water penetration, save energy, provide visual screens, and add security to new and renovated buildings—while making a stunning first impression. We call it “the look that works.”

CUSTOM SUN CONTROLS

THE LOOK THAT WORKS

OUR PRODUCTS

LOUVERS

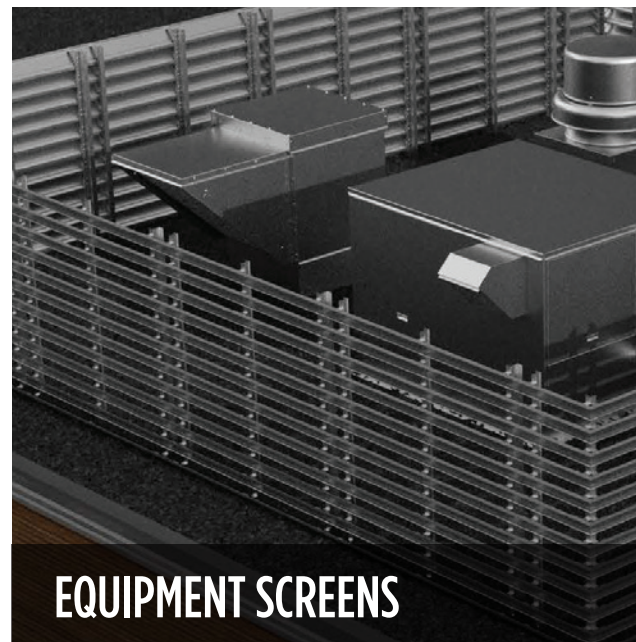

SUN CONTROLS

GRILLES

CANOPIES

EQUIPMENT SCREENS

With decades of industry experience - not just with the products we sell - but also how our products integrate with curtainwall, glazing, and other façade types, the Aiolite team delivers the right combination of products and services to meet the needs of today's complex projects. Working together with our extensive independent rep network, Aiolite's customer service team provides support throughout all phases of your project.

DESIGN TO DELIVERY

DESIGN ASSISTANCE

Airolite collaborates with architects and contractors to develop, modify, and integrate our products into the project design to maximize value and constructability while mitigating potential problems before they arise.

PRODUCT & FINISH SAMPLES

We offer standard louver, grille, sun control, and canopy product samples. Finish samples are available in both standard and custom colors. Many Airolite orders involve a custom color match; finish samples are produced to ensure that the architect and owner approve the custom color selected.

PROMPT & ACCURATE ESTIMATES

Our estimators provide quotes promptly, ensuring our reps and customers receive detailed, qualified quotes on time. We gather all of the necessary information in this stage of the process to ensure a smooth transition into product engineering and manufacturing with no surprises.

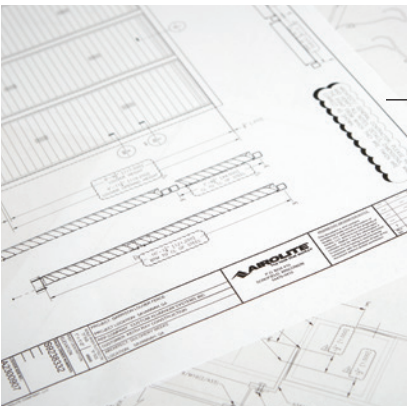

DEDICATED PROJECT MANAGEMENT

Always ready to assist you, our dedicated project managers provide streamlined communication on all project details including lead times, scope, design changes, fabrication, shipping, and more to keep your project on track and running smoothly.

PRODUCT SUBMITTAL ASSISTANCE

Our engineering team can provide technical documentation including technical specifications, drawings, test reports, certifications, installation instructions, and more.

DETAILED PRODUCT SHOP DRAWINGS

Our engineered shop drawings provide a clear representation of how our products will be built, assembled, and installed. These drawings are created by our in-house engineering team and coordinated by our project managers. Once completed, the project manager will share them with the contractor to determine if any conflicts need to be addressed before releasing them to fabrication.

FULL-SIZE PROJECT MOCKUPS

Airolite can provide full-size project-specific physical representations of proposed products during the design and planning project phases. This allows the owner, architect, and contractor to better understand what the final product will look like and how it will perform.

EXPERT MANUFACTURING & TESTING

Airolite products are American made in dedicated plants featuring state-of-the-art machinery and automation. In-house testing capabilities including impact testing, water penetration testing, and project-specific tests have resulted in the development of the largest portfolio of Air Movement and Control Association International, Inc. (AMCA) certified louver models in the industry.

DELIVERY & INSTALLATION

Built to exact specifications, Airolite products are shipped pre-assembled for increased efficiency, reduced labor and installation time, improved quality control, and a safer jobsite. Shipping, crating, and tracking follow-through ensure the product arrives on time and without issue. Our Qwik Ship program offers a wide range of available standard product configurations and accessories for accelerated delivery.
