Strato Automation

Product Description

I/O: 2 UI's, 1 AO & 1 BO's

Room Temp & Supply Control

BACnet MSTP: *B-BC BTL Certification (Pending)*

Applications:

- Room and/or discharge air control application
- 0-10 Vdc, 10 Vdc pulsed or 24 Vac pulsed control of single stage modulating output
- Local interface for user setpoint control & configuration. Configuration can also be made through BACnet

Symbol Definitions

The symbols defined below are used throughout this document to highlight information that requires particular attention.

ATTENTION: This information requires special consideration.

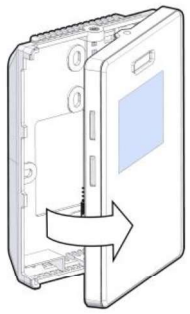
TIP: Identifies advice or hints to help the user perform certain tasks.

WARNING: Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury, equipment damage, or data loss. It may also be used to alert against unsafe practices.

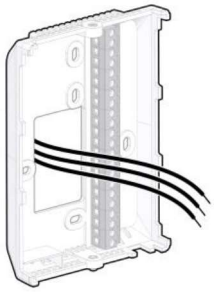
CAUTION: Indicates a situation where users must observe precautions for handling electrostatic-sensitive devices

Installation

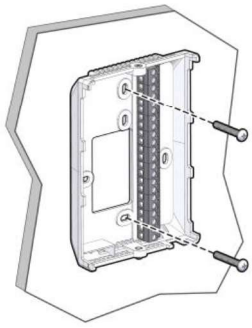
1. After unpacking your OS537, gently pull away from the base using the left side of the front cover.



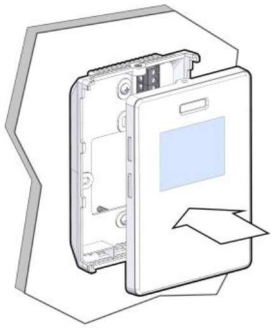
2. Pull the wires through the hole in the base.



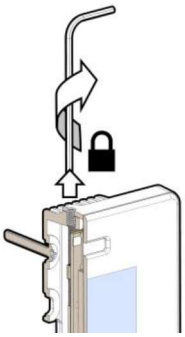
3. Use 2 screws to attach the base to the wall.



4. Connect the wires to the terminals. Refer to the documentation for the proper connections. Then, gently push the front cover straight on to the base.



5. Optionally use the lock screws on top and bottom to secure the cover. Use a 1/16" Allen key and turn counterclockwise until flat with cover.



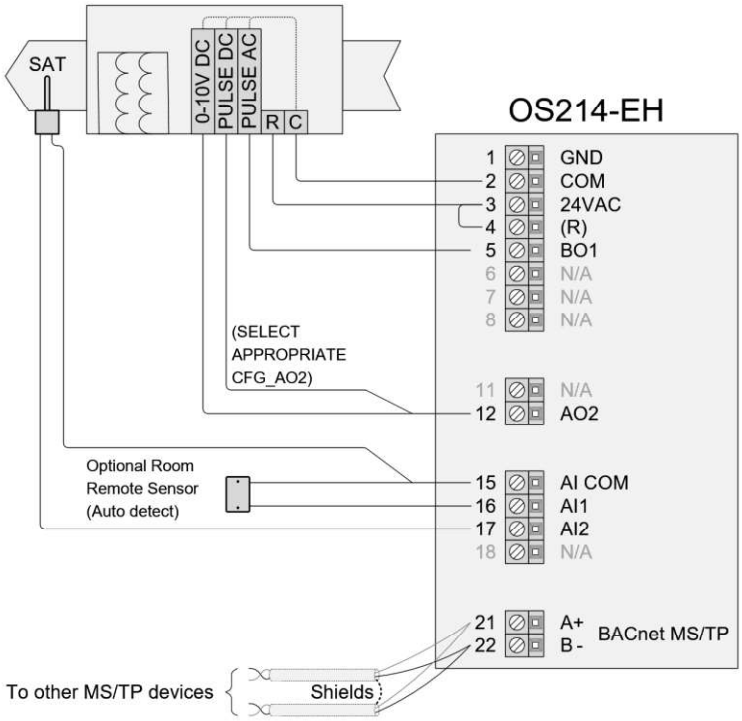
Electronic controls are static sensitive devices; discharge yourself properly before manipulating and installing the device.

Short circuits or incorrect wiring may permanently damage the controller. Double-check your wiring before applying power.

If a control failure could lead to personal injury and/or property loss, the installer must add safety devices and/or alarm systems to protect against failures.

Overview

CONNECTORS



Add a 24VAC transformer when the equipment does not supply the power.

For details on grounding within control panels, NFPA 79 and UL508A provide the required details.

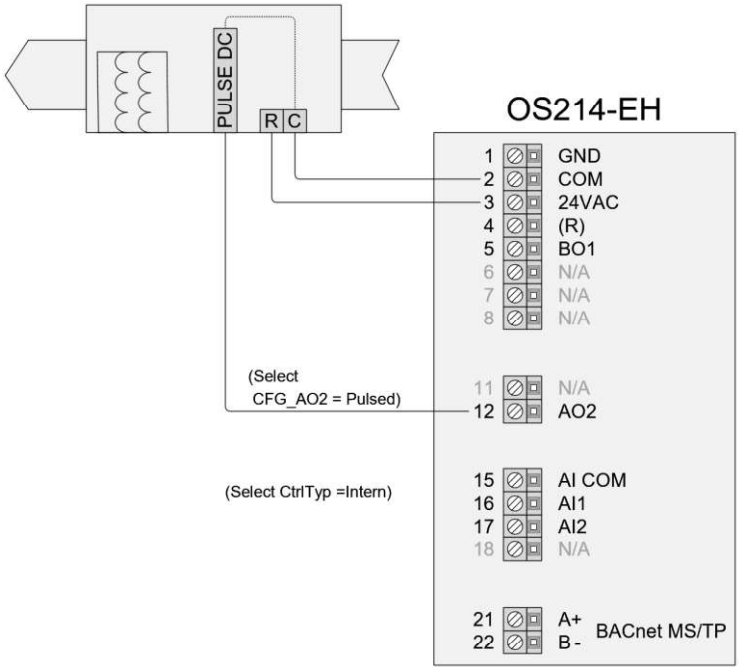
21	A+ MS/TP						BACnet
22	B- MS/TP						BACnet

Applications – Wiring

Room Pulsed 3-32VDC SSR



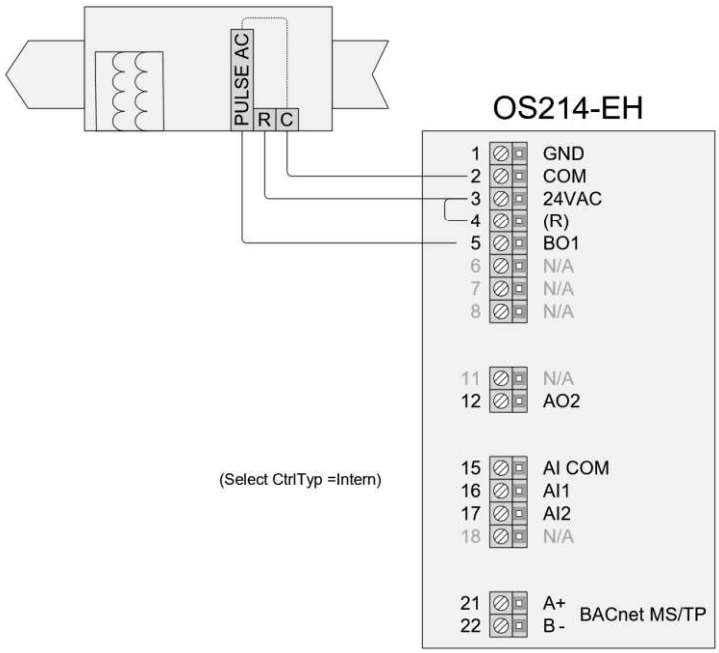
Sequence of operation

On a call for heating: The AO2 output will pulse 0V and 10VDC in a proportional duty cycle that increase progressively from 0% to 100% as the temperature drop. A control loop object will readjust the output over time period to maintain the temperature setpoint.

OBJECT INSTANCE	OBJECT NAME	DESCRIPTION	DEFAULT VALUE
AV-1	RoomSetp	Room temperature setpoint	70°F
AV-14	RoomPB	Adjust room heating prop band	5°F
MSV-6	CFG_AO2	Pulsed or 0 to 10Volt Analog output	Pulsed
LOOP-2	PidRoomT	Room temp heating control loop	0 to 100%

Applications – Wiring

Room Pulsed 24VAC SSR



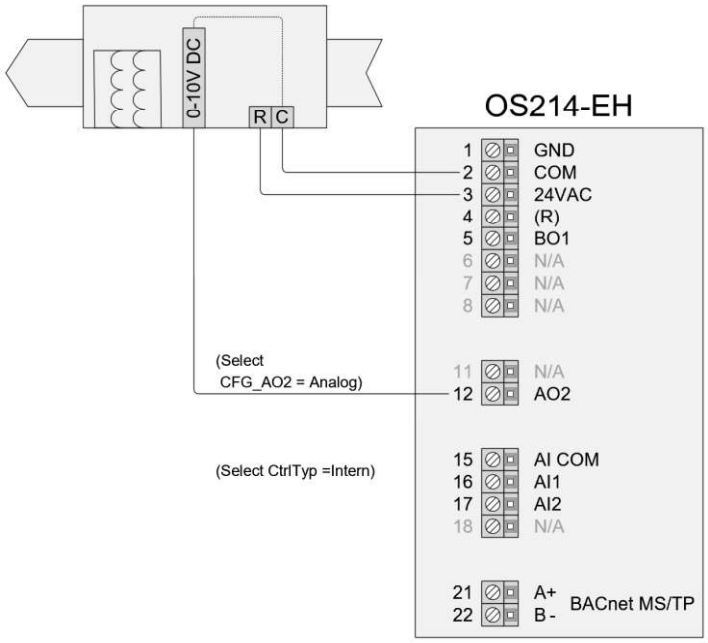
Sequence of operation

On a call for heating: The BO1 output will pulse 0V and 24VAC in a proportional duty cycle that increase progressively from 0% to 100% as the temperature drop. A control loop object will readjust the output over time period to maintain the temperature setpoint.

OBJECT INSTANCE	OBJECT NAME	DESCRIPTION	DEFAULT VALUE
AV-1	RoomSetp	Room temperature setpoint	70°F
AV-14	RoomPB	Adjust room heating prop band	5°F
LOOP-2	PidRoomT	Room temp heating control loop	0 to 100%

Applications – Wiring

Room 0-10VDC SCR



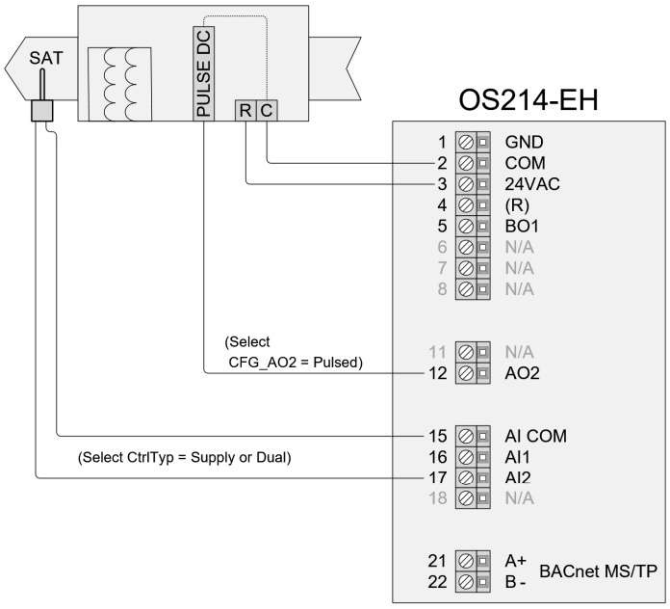
Sequence of operation

On a call for heating: The AO2 output will increase from 0V up to 10VDC progressively from 0% to 100% as the temperature drop. A control loop object will readjust the output over a time period to maintain the temperature setpoint.

OBJECT INSTANCE	OBJECT NAME	DESCRIPTION	DEFAULT VALUE
AV-1	RoomSetp	Room temperature setpoint	70°F
AV-14	RoomPB	Adjust room heating prop band	5°F
MSV-6	CFG_AO2	Pulsed or 0 to 10Volt Analog output	Analog
LOOP-2	PidRoomT	Room temp heating control loop	0 to 100%

Applications – Wiring

Supply Pulsed 3-32DC SSR



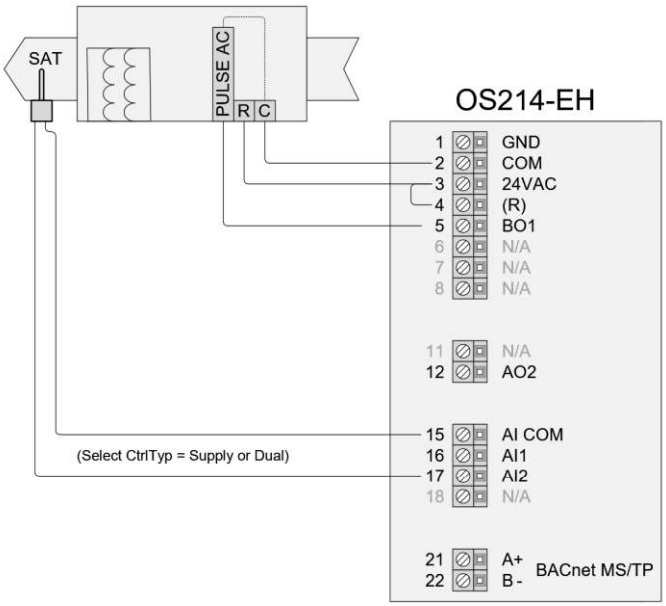
Sequence of operation

On a call for heating: The AO2 output will pulse 0V and 10VDC in a proportional duty cycle that increase progressively from 0% to 100% as the temperature drop. When control type "Dual" is selected, the control will maintain room temperature and a minimum supply temperature set by the supply temperature setpoint.

OBJECT INSTANCE	OBJECT NAME	DESCRIPTION	VALUE
AV-1	RoomSetp	Room temperature setpoint	Desired room setpoint
AV-2	Supp_SP	Supply temperature setpoint	Desired minimum supply setpoint
AV-14	RoomPB	Adjust room heating prop band	5°F
LOOP-2	PidRoomT	Room temp heating control loop	0 to 100%
LOOP-6	PIDSuppT	Supply temp control loop	0 to 100%
MSV-3	CtrlTyp	Control Type	Supply or Dual
MSV-6	CFG_AO2	Pulsed or 0 to 10Volt Analog output	Pulsed

Applications – Wiring

Supply Pulsed 24VAC SSR



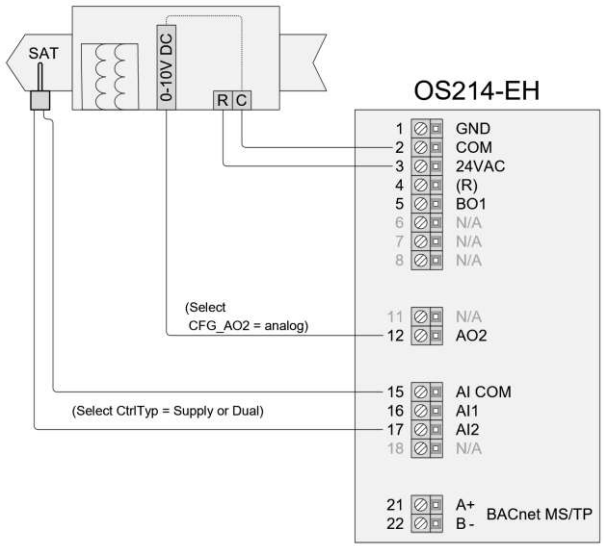
Sequence of operation

On a call for heating: The BO1 output will pulse 0V and 24VAC in a proportional duty cycle that increase progressively from 0% to 100% as the temperature drop. When control type "Dual" is selected, the control will maintain room temperature and a minimum supply temperature set by the supply temperature setpoint.

OBJECT INSTANCE	OBJECT NAME	DESCRIPTION	VALUE
AV-1	RoomSetp	Room temperature setpoint	Desired room setpoint
AV-2	Supp_SP	Supply temperature setpoint	Desired minimum supply setpoint
AV-14	RoomPB	Adjust room heating prop band	5°F
LOOP-2	PidRoomT	Room temp heating control loop	0 to 100%
LOOP-6	PIDSuppT	Supply temp control loop	0 to 100%
MSV-3	CtrlTyp	Control Type	Supply or Dual

Applications – Wiring

Supply 0-10VDC SCR



Add a 24VAC transformer when the equipment does not supply the power

Sequence of operation

On a call for heating: The AO2 output will increase from 0V up to 10VDC progressively from 0% to 100% as the temperature drop. When control type "Dual" is selected, the control will maintain room temperature and a minimum supply temperature set by the supply temperature setpoint.

Network

MS/TP Wiring

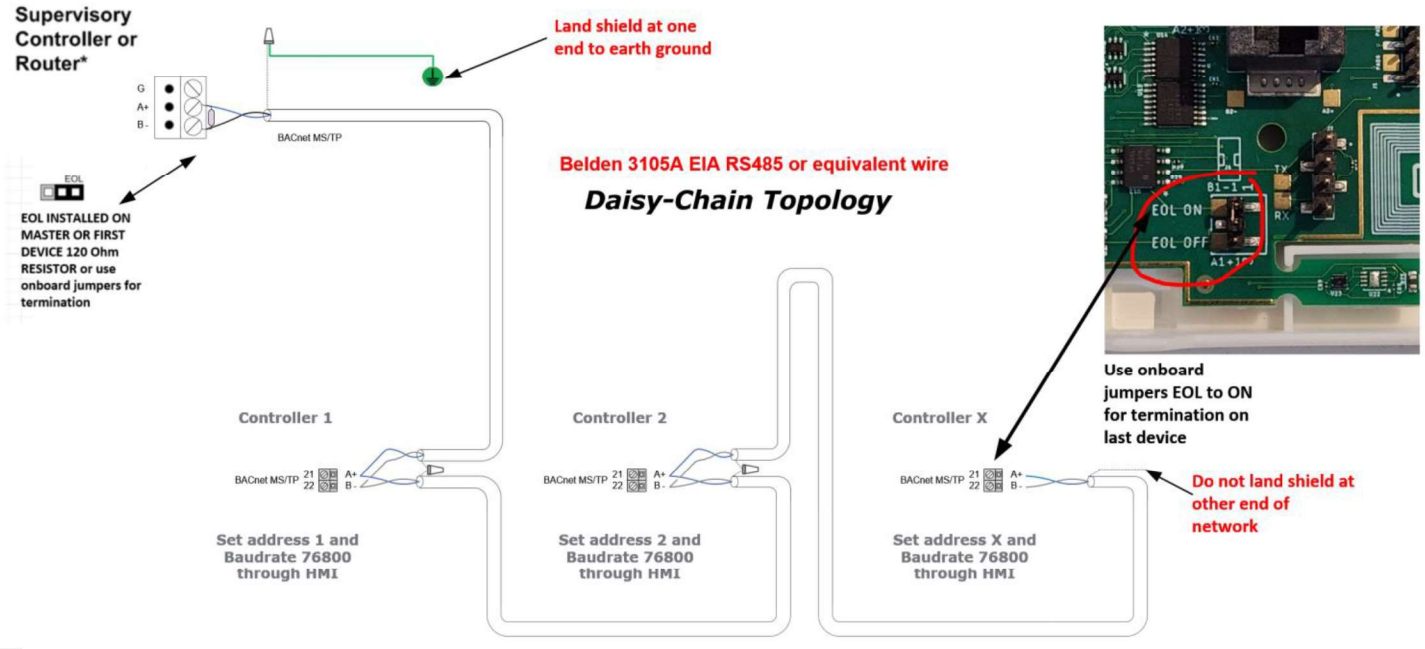
RS-485 Network Guidelines

The best way to ensure a robust and reliable RS-485 network is to build it around a daisy-chain configuration.

Connecting a multidrop 485 network.

The EIA RS-485 Specification labels the data wires "A" and "B", but many manufacturers label their wires "+" and "-". In our experience, the "+" wire should be connected to the "A" line, and the "-" wire should be connected to the "B" line. Reversing the polarity will not damage a 485 device but will not communicate. That being said, the rest is easy: always connect "+" to "+", and "-" to "-".

Do not forget the Signal Ground. *While a differential signal does not require a signal ground to communicate, the ground wire serves an important purpose. Over hundreds of thousands of feet, there can be significant differences in the voltage level of "ground". The function of the signal ground wire is to tie the signal ground of each node to one common ground. If the ground voltage rises above 3 VAC, data will be lost, and the port itself will often be damaged. However, if the differences in signal grounds are too great, further attention is necessary.*



Specifications

OS214-EH

OPENSTAT Electric Heat

BACnet MS/TP Controller

Strato Automation

OPENSTAT

Description

- Configurable wall or panel mount controller for electric duct heater applications
- Native BACnet MSTP enabled and ready with BTL certified as a B-ASC
- Room and or discharge air control application
- 0-10 Vdc, 10 Vdc pulsed or 24 Vac pulsed control of single stage modulating output
- Local interface for user setpoint control & configuration. Configuration can also be made through BACnet
- 4 I/O: 2 UI, 1 AO, 1 BO
- BACnet MS/TP: *B-BC BTL Certification (Pending)*

Application

The OS214-EH controller is designed to facilitate the control and management of custom electric resistive duct heater equipment typically used in the HVAC industry. It allows powerful solutions that can be configured according to any project needs. It features a very flexible I/O set capable of meeting electric heaters applications such as modulating small zone heaters, large staged heater systems, room and or discharge air control for central system control or make up air systems.

Technical Specifications

Power supply:
- 24 VAC/VDC ± 15%; Class 2

Current Consumption:
- 1.5 VA controller only
- 50 VA Max including BO 2A max

Communication Protocols:
- BACnet MS/TP half-wave device
- Baud 9600, 19200, 38400, 76800 Bps (76800 default) RS485 transceiver is a ¼ load device
- Mini USB2 MS/TP network access
- BTL listed: B-BC, BACnet Building Controller

Hardware
- Microprocessor: STM32 (ARM Cortex™ M33) 32 bits
- CPU Speed: 250 MHz
- Memory: 2 Mbytes non-volatile Flash
- RAM: 640 KB SRAM
- Real-time clock (RTC): Built-in capacitor (one-week backup)

Configuration
- Configurable using the local buttons, writing to the BACnet configuration objects or Strato Software tools.

Inputs:
2 temperature Inputs (AI)
- Thermistor 10KΩ (type 2 or 3)
- Resolution: 12 Bits (4096 segments)

Outputs:
1 Binary Output
- MOSFET Solid State Relays, Isolated
- Zero cross-fired
- 10 to 30VAC, 2.0A max

1 Analog Outputs
- Voltage 0 - 10 VDC linear or pulsed

Mechanical:
- Dimensions: W 3.58"(91 mm) x H 4.92"(125 mm) x D 0.98"(25 mm)
- Stocking temperature: -30 °C to 50 °C / -22 °F to 122 °F
- Operating conditions: 0 °C to 50 °C / ...°F to 113 °F 10% to 90% H.R. without condensation
- Mounting type: Standard 2" x 4" electrical junction box
- Enclosure: White color, PCABS material UL94VO

Warranty: 1 Year

Certifications:
- UL 916 Energy Management Equipment
- BTL listed: B-BC, BACnet Building Controller
